10	Custom Commands	3

1 Exercise 3.1

LaTeX is a powerful tool for creating professional documents. It allows users to easily organize their content and control its appearance.

SSTIA is a student association focusing on science, technology, and innovation. There is a *100%* possibility that you can learn new knowledge, make new friends, and even host a large event in SSTIA.

2 Introduction

LaTeX is widely used for academic papers and reports.

2.1 Motivation

Learning LaTeX helps students create professional documents.

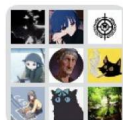

3 Exercise 5.1

Learning Plan

1. Basic Syntax
 - Text formatting
 - Sections
2. Advanced features

- Figures
- Tables

4 Exercise 6.1

群聊: 26fall 科协咨询群

Figure 1: An example image.

Figure 1 shows an example image.

5 Exercise 7.1

Table 1 shows an example three-column table.

Student	Department	Score
Alice	Computer Science	95
Bob	Engineering	88
Cindy	Physics	92

Table 1: Student scores

6 Cross-References

This section demonstrates cross-references in LaTeX.

We can refer to Section 6, Figure 1, and Table 1.

The current section can also be referenced by its page number: see page 2.

7 Hyperlinks

LaTeX provides convenient commands for adding hyperlinks.

Visit the LaTeX Project for more information.

You can also visit <https://ctan.org>.

8 Page Layout

The page margins have been set to 1 inch using the `geometry` package.

A custom header has also been added using the `fancyhdr` package.

The document title appears on the left side of the header, while the page number appears on the right side.

9 Using Packages

The `xcolor` package can be used to add colors to text.

For example:

This sentence is written in blue.

10 Custom Commands

We can define our own commands to avoid repetition.

For example, we define a custom command called `\highlight` in the preamble.

Here is some **important information**.

We can use the same command again: **LaTeX makes document creation easier**.
